

**THE IMPACT OF MODERN INFORMATION PSYCHOLOGICAL THREATS ON
YOUTH WORLDVIEWS****Muxiddinova Dilnoza**

Senior lecturer of the Department of psychology of Gulistan State University

Annotation

In today's world, where the world has become a single information space, the struggle for ideas is intensifying in various forms. At the same time, in the words of the Head of State, the struggle against anti-idea, anti-ignorance and enlightenment is becoming their main motto in the activities of the media. It is known that every newspaper, magazine, radio, television, the Internet has the power to have different levels of psychological impact on the public consciousness. For example, in newspapers, opinions are conveyed in writing, and when the time comes, through pictures. Information provided in the press can also be read over and over again and used as a source. This is one of the advantages of print media. In this article, Modern Information discusses the impact of psychological threats on young people's worldview.

Keywords: *information age, technology, psychological threat, modern information, youth worldview.*

Today, the information services of the republican television and radio company, a number of publications and organizations also bring their information to the attention of the world community through their respective websites. So, we have the right to say that the Uzbek media now has a worthy place in the world information space. In addition to obtaining the necessary information in this space, we also see the damage of information attacks, moral threats. It should be clear to all of us that in the so-called "information age" of the XXI century, no state or society can live within an iron wall. At the same time, it is not right to pretend that this is the case, and in response to such threats, we must also take the necessary measures, - said the head of state. - We know that our people are kind, simple and trustworthy. He looks with confidence at what has been published in the press, on television and on the radio. The information centers that are working against us from abroad will try to take advantage of this. ”

So, we will try to find a brief answer to the question of how those who work against us use the media. We will take a broader approach to the subject in this regard. In other words, in addition to committing "information attacks" from abroad, it is appropriate to openly answer the question of whether we do not make mistakes, and whether our students are not morally harmed. As people look more confidently at the press, it means that spelling mistakes, obscene sentences, irrational ideas, wrong terms and phrases in the newspaper will make the reader illiterate and distracted. It is unfortunate that such shortcomings have been allowed in some publications in recent times.

It should be noted that the information-psychological impact is mainly carried out through the media, in particular, radio broadcasts. Some people with destructive ideas try to use this power of the media to their advantage.

Disadvantages of the Internet: anyone can enter the virtual space without hindrance with any information. In the first place, the number of intruders who take advantage of the lack of control will increase. As a result, the Internet can become a "space" that promotes vandalism, subversive ideas, pornography, and other vices. As a media outlet, there are many pros and cons of the internet. First of all, it is cheap to prepare and disseminate information, and it can easily cross the state border. It is very difficult to prevent information attacks on the Internet⁴. It is becoming common for some people to use it to pursue their own ends through the Internet. They

are trying to pose a spiritual threat in every way. So what is a spiritual threat? A brief answer to the question of why they are being threatened can be found in the book "High spirituality is an invincible force." "Spiritual threats are, first of all, ideological, ideological and informational attacks aimed at destroying the spiritual world of every person, regardless of language, religion or belief," he wrote. - If we look at the issue from a practical point of view, any attack on our spirituality is a unique and appropriate feature that makes our nation a nation, passed down from ancestors to generations for centuries, millennia, a sense of national pride, national progress. It represents the terrible dangers that call upon us to get rid of all the complications and vices of this path and to strike a great blow to our noble goals, such as building a free and prosperous life. ”

It should be noted that today some media outlets are becoming a tool for information and psychological warfare.

In addition to the task of collecting and disseminating information, the modern media is also responsible for protecting the people of the country, especially the younger generation, from various information attacks and ideological threats. have sufficient skills and abilities about the capabilities of the media, methods of collecting information and disseminating it to the public. The secrets of this industry are better known to them than anyone else. But does the work being done meet today's requirements? ” After all, today ideological opponents are trying to poison our spirituality, especially the minds of our youth, with "information attacks." They are increasingly threatening and influencing under the guise of "popular culture." It is impossible to look at it indifferently.

An information war waged for selfish ends is waged with careful thought. They use psychological, electronic and other methods in this regard. It doesn't take a lot of work to wage an information war, there's no need for expensive weapons. In this war, the borders of the state will not matter. Information tools have broad and narrow meanings. In a broad sense, they are actions that encourage the opponent to think in the right direction, are able to change his point of view, and are carried out with the help of the necessary information. In the narrow sense - technical methods and technologies that provide control over the opponent's information resources and damage its telecommunications systems. Hence, information weapons are special devices and tools that affect a competitor's information and management systems. Naturally, the possibilities for the use of such weapons by countries with advanced information technologies are very wide.
